

DIY SCENTED KINETIC SAND SLIME

PROVIDED BY: [HTTPS://WWW.MCCORMICK.COM/](https://www.mccormick.com/)

Make your own slime with this Kinetic Sand Slime recipe. All you need to make homemade slime are a few simple slime ingredients like food coloring, extracts, and glue for a gooey, scented kid-friendly fun project! This no-Borax slime is the perfect way to get in on the slime trend safely.

Prep Time: 10m

INGREDIENTS

Servings

- 1 cup fine white craft sand, (found at craft stores or online)
- 1 tablespoon cornstarch
- 1 tablespoon unscented liquid dish soap
- 1 bottle (4 ounces white or 5 ounces clear) washable school glue
- Your favorite McCormick® food color(s)
- Your favorite McCormick® extract(s)
- 3 teaspoons contact lens solution

INSTRUCTIONS

1. Mix sand, cornstarch, and dish soap in a medium glass bowl until well blended.
2. Stir in glue, desired food color(s) and extract(s) until well blended and you get the color and smell you want.
3. Stir in contact solution, 1 teaspoon at a time, until mixture becomes difficult to stir and is no longer sticky. (If necessary, add more contact solution until desired consistency.)
4. Knead in hands until you form a ball that is slightly wet, but does not stick to hands. (Slime is ready to use when you can touch the slime and pull your fingers away without anything sticking to them.)
5. Store slime in an airtight container when not using.
